

SAFECO Plan Customizer

It is often said that nothing is factual until it is written down. The same is true of safety and health policies and procedures. With OSHA's emphasis on written compliance programs in a wide variety of compliance areas, the need to write it down is even greater. SAFECO Commercial Risk Control is prepared to assist.

SAFECO Plan Customizer (SPC) is a tool used by Risk Control to help customers draft and publish written safety plans in many program areas, as well as assistance with OSHA and DOT compliance. SPC covers more than 50 general industry and construction safety plan topics. See the list below.

SPC will assist customers in documenting how they are managing safety and health, complying with the applicable regulations and to think through new and revised plans. SPC topics include general safety programs and policies as well as specific programs with effective management organization and good safety and health practice. Customers are always involved, to ensure that each plan is tailored to specific needs, sites, people, departments, policies and culture.

Needs Assessment: SPC Asks the Defining Questions

SPC can be used to respond to new or revised programs, exposures, or regulatory actions. SPC can also be used to survey or audit safety and health programs to determine gaps in published programs. Using a specially adapted, licensed software program, SPC's Needs Assessment reviews a broad range of topics through a series of "yes" and "no" questions covering the types of exposures that may exist. The answers to these questions help determine specific safety plans needing attention.

Developing Plans: Taming the Devil in the Details

SPC asks the questions that need to be asked — then, using the answers input, writes the plans that need to be written! SPC is not just words on paper, but working documents with specific assignments, responsibilities, rules and procedures, each customized to meet needs.

SAFECO representatives assist customers in selecting one or more plans for review, provide plan questions and consult on content. Many plan questions are in a "yes"-"no" form, while others allow text answers — a few words or extensive information. Some questions/answers automatically trigger new plan sections, limiting content to paragraphs fitting customer needs. Unique language can be entered wherever needed. Regulations can be quoted with ease.

SAFECO Commercial Risk Control not only advises, but also prepares the documents. Plans are delivered in both printed and electronic form, for ease of updating and revision.

SPECIALIZED SERVICES

SAFECO Plan Customizer

SAFECO Commercial Risk Control has the tools to assist in the development of effective written safety and health plans.

Plans created are modern, practical and easy to read. Documents are fully edited and ready to use.
