

SAFECO and DriverCheck Team Up

Timely, accurate feedback regarding the performance of your drivers while they are "on the road" is critical to maintaining and improving a good safety record. You cannot be there all of the time, but other drivers are ready to assist.

DriverCheck is a road observation program that encourages the driving public to report good and discourteous driving practices on roads and highways.

90% of all accidents are caused by driver actions, which are the expressions of their behavior, attitude, and personal choices.

— U.S. Department of Transportation

How You Can Benefit

Reduced Costs

- Insurance — fleet insurance is loss sensitive — costs increase with accidents; lower accident frequency and severity lower your insurance premium
- Operations — lower cost for vehicle repairs, including damage below your deductible, repair/replacement of cargo, recruiting/training employees, and reduced maintenance costs
- DriverCheck is provided within insurance premiums

Improved Efficiency

- Reduce Accident Frequency — full implementation of DriverCheck helps you reduce accident frequency and the associated down time and late deliveries.
- Save Management Time — reduced time devoted to police reports, accident investigation, insurance reports, and possible lawsuits.

Improved Public Image

- Increased professional, courteous, and safe driving exhibited by company drivers. DriverCheck decals communicate your driver's commitment to safety.

SAFECO Loss Control Assists at Every Step

- **Enrollment** — We help you complete the forms and forward them to DriverCheck
- **Implementing DriverCheck** — Consultation as you launch the program within your company.
- **Monitoring Results** — Guidance in establishing benchmarks at the beginning of the program to highlight your drivers' improved driving performance.
